

Figure 1 consists of 12 histograms arranged in a 4x3 grid. The columns represent different values of n (10, 20, and 40), and the rows represent different values of a parameter. The x-axis for all histograms is 'Number of non-zero elements' ranging from 0 to 100. The y-axis is 'Frequency' ranging from 0 to 10. The distributions are centered around 50 for $n=10$, 100 for $n=20$, and 200 for $n=40$.
